

FACT SHEET

PESTMASTER MOUSE & RAT KILLER BAITS

Pestmaster Mouse & Rat Killer Bait products are available in pellet form as well as weather resistant wax blocks. They incorporate 0.05g/kg of the active brodifacoum which is a “single feed kills” active ingredient. The baits are highly effective in controlling rats and mice in and around buildings and domestic properties. The products have been formulated to be attractive to rats and mice.

The key properties of Pestmaster Mouse & Rat Killer Pellets are;

- 5mm diameter pellet.
- Very hard and attractive to rats and mice.
- “One feed kills” formulation.
- Available in 200g retail bait packs and 7.5kg pales.

The key properties of Pestmaster Rat & Mouse Killer Wax Blocks are;

- 25mm cube shaped baits with a hole through the middle to assist with securing baits.
- Very hard and resistant to weather breakdown.
- There are a minimum of 50 blocks per kilogram of baits.
- Available in 1kg tubs and 10kg pales.

Successful Baiting

The keys to successful baiting are;

- Determine where rodent activity is occurring.
- Where possible other food sources should be removed to ensure baits are eaten.
- Baits should be secured in bait stations where possible to ensure non target species are not affected.
- Multiple baiting points should be used no more and 3m apart.
- Baits should be replenished regularly until bait is not being consumed.
